For a full price list, visit www.eloopllc.com.

As television broadcasting across the U.S. converts to digital transmission, many individuals will be replacing their analog televisions with new digital models. **eLoop** will recycle televisions, computers, monitors, cell phones, and other digital equipment in an environmentally safe way without shipping material overseas. **eLoop** will provide an onsite data destruction system to destroy hard drives for those individuals that are concerned about recycling a PC or a laptop. Details can be found at www.eloopllc.com.

According to Ned Eldridge, president, eLoop llc, "More than 138,000 tons of e-waste ends up in Pennsylvania landfills every year. Over time, the improper disposal of televisions and other electronic devices will lead to environmental poisons leaking into our soil. eLoop operates in a completely above-board fashion, and we pride ourselves on our environmental stewardship with our recycling processes. We're proud to collaborate with Global Links and the Pennsylvania Resources Council on this recycling effort."

Global Links recovers unused medical supplies and gently used medical equipment such as crutches, nebulizers, wheelchairs, among other items, and provides them to hospitals and clinics serving poor populations in developing countries. Learn more about Global Links at www.globallinks.org.

Pennsylvania Resources Council is one of the oldest citizen action environmental organizations in the Commonwealth. Founded in 1939, PRC educates, advocates for and implements resource conservation programs, which give people of all ages the knowledge, tools and ability to be stewards to and lessen their impact on the environment. Find out more about PRC at www.prc.org.
