

Take a quick look around your house and you may discover as much as 100 pounds of "household hazardous waste."

According to the U.S. Environmental Protection Agency, an average home can easily accumulate this amount of products containing potentially hazardous components.

Learn to identify household chemicals:

- **CLEANING PRODUCTS**
bathroom, kitchen, all-purpose
- **AUTOMOTIVE PRODUCTS**
motor oil, antifreeze, brake fluid
- **GARDEN & POOL SUPPLIES**
insecticides, herbicides, fungicides, pool chemicals
- **HOBBY PRODUCTS**
oil-based stains, photo chemicals, glues
- **PERSONAL CARE & PHARMACEUTICALS**
mercury thermometers, nail polish remover

Look for these words on the label: poison, danger, warning, caution, flammable, reactive, corrosive, explosive, toxic, harmful, fatal and hazardous.

Did you know

...The skin of older adults is thinner and more easily penetrated by liquids.

...Individuals who require the use of oxygen to assist in breathing should be aware that oxygen does not mix well with many household chemicals.

...Some individuals have poor nutrition and/or may not drink enough water to sustain a buffer needed to minimize the effects of instantaneous poisonings.

...As people age, they may develop cataracts or glaucoma, which can impair their vision. If they cannot clearly read directions, they may not use a product properly.

...Medications can temporarily affect a person's cognitive, sensory and physical ability to safely use or manage hazardous products.

EMERGENCY SITUATIONS

If you have a poisoning emergency, call **Pittsburgh Poison Center** at

1.800.222.1222

If an individual has collapsed or is not breathing,

call 911

Pennsylvania Resources Council's mission is to promote conservation of our natural resources and protection of scenic beauty through public education and outreach in a collaborative effort with government agencies, business, charitable foundations and other nonprofit organizations.

Sure Bets for Senior Safety

Protect older persons from potentially dangerous hazards in the home.

A Publication of
The Pennsylvania Resources Council

Top 10 Home Safety Tips for Seniors

10) ALWAYS READ LABELS

Understand precautions and follow directions for all household chemicals and medications. ALWAYS remember to ask for help when you need it.

9) AVOID MIXING

Do not mix any substances together unless a label specifically states that it is safe to combine them.

8) KEEP IN SAFE PLACE

Store all chemicals out of reach from children and pets. NEVER store chemicals near food.

7) STORE IN WELL-LIT AREAS

Always make sure household chemicals – and medications – are stored in well-lit areas to avoid mix-ups.

6) LABEL PRODUCTS

Label all homemade cleaning formulas.

5) POST EMERGENCY NUMBERS

Know emergency phone numbers – such as the Pittsburgh Poison Center – and label them clearly on your phone.

4) USE NON-TOXIC ALTERNATIVES

Purchase non-toxic alternative products or make your own non-toxic products at home from ingredients such as baking soda and vinegar.

Special tips for those moving:

3) DO NOT LEAVE MATERIALS BEHIND

Do not leave any hazardous waste behind when you move. Ask for help from family or friends to clean out chemicals in the basement and storage areas.

2) IDENTIFY PRODUCTS IN ADVANCE

Identify which materials may be hazardous in your home, and make plans to properly dispose of them – don't wait until the last minute.

1) DISPOSE OF HOUSEHOLD CHEMICALS

Properly dispose of leftover or unusable household chemicals at a household hazardous waste collection. Or share leftovers by asking the new homeowner – or friends and neighbors – if they can use any of the remaining products.
